Problem Statement

1. What are the different methods to call a function in R?

Answer   : A function is a piece of code written to carry out a specified task. Different methods to call a function in R are:-

Call(name, …..) # returns an unevaluated function call

do.call # for calling a function by name and argument list

Recall # for recursive calling of functions

2. The lazy evaluation of a function means, the argument is evaluated only if it is evaluated only if it is used

inside the body of the function. Say True or False.

 Answer : True

3. State True or False:

    a. **Insights driven from descriptive analytics is not meaningful.**
       Answer   : False

    b. **The number of values in each Elements of a list, should be equal.**
       Answer   : False

    c. **The datasets are not stored in memory of the computer using R.**
       Answer   : True

    d. Data frames and matrices are two dimensional however the array is multidimensional.
       Answer   : True
